

## **Basingstoke's State of the Art Dentists**

### **Dental excellence on your doorstep**

**11<sup>th</sup> May 2016. Basingstoke, Hampshire.** Thanks to major advances in dental implant technology most patients can now benefit from fully fixed teeth in just a single visit, even if they have been previously told that they do not have enough bone to support implants.

The award-winning specialist team at the Basingstoke-based Glenholme Dental Centre have the specialist training and experience in leading edge techniques to enable them to achieve in just one visit what would elsewhere take months or even years, involving multiple visits.

Dr James Kleiber, the practice medical director and expert in dental implants at **Glenholme** Dental Centre, explains, "We use technologically advanced equipment to minimise gum damage if tooth removal is required and a new system called Plasma Rich Growth Factor (PRGF) which accelerates the patient's own tissue healing and gum/tooth regeneration.

Our unique implant experience combined with our innovative technologies make dental implants much quicker and easier for our patients. Healing rates are improved, recovery times are shortened and patient discomfort is minimised."

James' patient, Christine Durkin, a local business consultant has benefitted from the expertise offered at Glenholme, over the last 8 years.

Christine explains, "Last summer I had the misfortune to fall off my bike, breaking my two front teeth very badly in the process. Thanks to James' same day implant procedure, I had two new beautiful front teeth in very short order and ironically it was my damaged tongue that took much longer time to heal."

James continues, "Basingstoke can boast one of the most technically advanced dental practices in the South East and it is our highly qualified specialist team offering the full spectrum of dental treatments ranging from, same day implants through to bridges, veneers, routine clean and check-ups, who are achieving the outstanding results.

Christine Durkin sums up, "My new teeth were fitted in a day and I cannot praise James and his team highly enough. We really are blessed to have such a team of specialists offering world-class dentistry in Basingstoke." **ENDS**

Notes to Editors:

## Glenholme Dental Centre – The Team and the Technologies

Please meet our multi-award winning team:

### **James Kleiber – Medical Director & Expert in Dental Implants**

Having qualified and taught at Guy's Hospital, James is in charge of the dental implant and restorative dentistry referrals at **Wordsworth House** and Glenholme Dental Centres. In addition to being an award winning dentist, he is also a key opinion leader for Nobel Biocare teaching dentists how to place and restore implants. James now leads and teaches at The Diamond Academy professional development continuing professional development (CPD) seminars which he and his team organise across Europe.

### **Somayeh Modarres-Simmons – Specialist Endodontist**

Somayeh trained at Guy's Hospital graduating in 2004. Being a self-acknowledged perfectionist, Somayeh selected Endodontics for her diploma and extended her expertise by attaining her Masters of Clinical Dentistry in Endodontology in 2014. Practicing initially in London, Somayeh joined the Wordsworth House team at Romsey in early 2015 and she is enjoying living and working in the new area.

**Pegah H. Pasha – Specialist Periodontist**

Pegah qualified with distinction from the University of Gothenburg, Sweden in 2001 and has been practicing dentistry in UK since 2003. She gained her certificate in Restorative Dental Practice from the prestigious Eastman Dental Hospital in 2009 and gained her MClindent in Periodontology, at Guy's hospital, London in 2013. As a part of her specialist training she has been involved in the teaching of undergraduate dental students and has a keen interest in health psychology.

**Shahir Shamsuddin – Paediatric Dentist**

Shahir has a special interest in treating children and has been a clinical teacher in paediatric dentistry at King's College Hospital since 2010. He recently completed a Postgraduate Certification in Paediatric Dentistry and has extensive experience in this field, covering a range of specialties to help patients. As with all the Glenholme and Wordsworth House Team, Shahir is particularly good at reassuring nervous patients.

**Lucy Ansselin – Dental Hygienist and Therapist**

Lucy qualified from the GKT Dental Institute in London and has 9 years of experience working in dentistry. As a member of the British Society of Dental Hygiene & Therapy, Lucy is committed to updating her knowledge and techniques.

**Charlie Grahame – Dental Hygienist and Therapist**

Charlie trained at the Eastman Dental Hospital in Dental Hygiene and Therapy. She worked with various departments and specialists enabling her to develop a wide knowledge and skill set. On qualifying Charlie was awarded the BSDHT Education award for highest academic achievement and she is now a member of the BSDHT Southern group.

## The Technologies

### Plasma Rich Growth Factor (PRGF-Endoret)

The pioneering Plasma Rich Growth Factor (PRGF) system mentioned in the release uses the patient's own tissue to assist in the healing and gum/tooth regeneration after surgery.

The PRGF-Endoret technique is based on a concentrate of the patient's own platelets and growth factors (obtained by taking a small amount of the patient's blood). It is recognised world-wide and is also proving to be highly successful in cosmetic surgery.

With the support of the PRGF system, the patient's own growth factors reduce inflammation, lower the risk of infection, minimise pain and boost the regeneration process.

### The Piezotome 2

The Piezotome 2 is a gently vibrating ultrasound device that allows the dentists to perform surgical procedures with minimally invasive techniques, and with much less post-operative discomfort.

James Kleiber is a lecturer in the use of the Piezotome 2 and has published several papers on its advantages.
